Title:	"Mobile Communication Devices With Quick-Send Features And Methods Therefor"		

APPEAL BRIEF UNDER 37 C.F.R. § 41.37(c)

Assistant Commissioner for Patents
Alexandria, Virginia 22313

Sir:

Real Party In Interest

The real party in interest is Motorola Inc. by virtue of an assignment duly executed by the named inventor(s) and recorded in the Patent Office on REEL/FRAME 011725/0540.

Related Appeals & Interferences

There are no related appeals or interferences.

Appl. No. 09/941,265
Confirm. No. 7226
Examiner M. Genack
Art Unit 2645

Status of Claims

Claims 1-19 are pending, stand finally rejected, and are the subject of the instant appeal. A copy of the claims pending is attached in Appendix A.

Status of Amendments

No amendments have been filed subsequent to the mailing of the final Office Action on 16 December 2005.

Summary of Claimed Subject Matter

The claims are drawn generally to wireless communication devices that associate stored information with one or more sequential inputs of the device, for example, inputs "1" or "11" or "111", etc. Cho specification, page 5, line 11 – page 7, line 17. In one embodiment, a network communication address, for example, a telephone or facsimile number, or an Internet address, is associated with sequential key inputs, including first and last inputs of the same key. Page 4, lines 11-16. The stored information, for example, the communication address, associated with the input of key is transmitted from the wireless communication device by entering the one or more sequential inputs associated therewith and maintaining the last input thereof for a minimum input time interval. Cho specification, page 7, line 18 – page 8, line 5. In a more particular embodiment, different communication addresses related to a common identifier are associated with different inputs of the same input key. For example an individual's home number may be associated with a single input of the "1" key, the individual's work number

may be associated with two inputs of the "11" key, and the same individual's mobile number may be associated with three inputs of the "111" key. Cho specification, Page 6, line 9 – page 7, line 9.

Grounds of Rejection for Review on Appeal

Whether Applicant's 131 Declaration supports conception of an Internet enabled wireless communication address.

Whether Applicant's 131 Declaration establishes diligence.

Whether Claims 3-4, 6-8 and 13-17 are patentable over U.S. Publication No. 2002/0091754 (Jang) in view of U.S. Patent No. 5,710,810 (Tiilikainen) under 35 USC 103(a) if the 131 Declaration is unsupported.

Whether Claims 1-2, 5 and 12 are anticipated by U.S. Patent No. 5,535,258 (Joglekar) under 35 USC 102(b).

Whether Claim 19 is patentable over Joglekar in view of Tiilikainen and Mager under 35 USC 103(a).

Arguments Re: Conception & Diligence

Rejection Summary

Claims 1-19 stand rejected under either 35 USC 102(e) or 35 USC 103(a) based on Publication No. 2002/0091754 (Jang) either alone or in combination with one or more secondary references.

Applicant's 131 Declaration filed on 28 February 2005 and the Supplemental Declaration filed on 30 September 2005, swearing back of Jang,

stand objected to for failure to a "...disclose Internet enabled mobile wireless communication device" and for lack of diligence, respectively.

Conception; Discussion of Applicant's 131 Declaration

Claims 9-11 relate to an Internet enabled wireless communication device that associates an Internet address with a key input and that transmits the stored Internet address from the device upon maintaining the key input for a minimum input time interval. Claim 19 specifies that one of a plurality of communications addresses includes an "Internet address". The original invention disclosure teaches associating different types of network address information, i.e., home, cell, pager, and office telephone numbers, with one or more inputs of an input key on the device, wherein transmission is effected by maintaining the last key input for a minimum input time interval.

An Internet address is a particular type of network address, as are home, cell and pager numbers. Thus the original disclosure of associating different wireless addresses with inputs from user interface keys fully encompasses the association of an Internet address with a key input. The original disclosure thus supports conception of the subject matter of Claims 9-11 and 19 prior to the effective date of Jang. Kindly withdraw the objection to Applicant's Declaration for failure to establish disclosure of an Internet address.

Diligence; Discussion of Representative's Supplemental 131 Declaration

It is only necessary to establish diligence from a time prior to the effective prior art date until the filing of the instant patent application. The

Art Unit 2645

undersigned representative submitted a Supplemental Declaration under 37 CFR 1.131 establishing diligence between 26 December 2000 (effective date of Jang) and the priority filing date 30 March 2001 of the instant application. The Declaration establishes that the undersigned had a docket with reasonable number of backlog cases that were prepared expeditiously and in chronological order during the critical period. See MPEP 715.08(a) & 2138.06 "Diligence Required in Preparing and Filing Patent Application". The Supplemental Declaration therefore establishes diligence required under 37 CFR 1.131 to antedate the Jang reference. Kindly withdraw the rejections under 35 U.S.C. 102(e) and 35 U.S. C. 103(a) based on Jang.

Arguments Re: Joglekar

Rejection Summary

Claims 1-2, 5 and 12 stand rejected under 35 USC 102(b) as being anticipated by U.S. Patent No. 5,535,258 (Joglekar). Claim 19 stands rejected under 35 USC 103(a) as being anticipated by Joglekar in view of Tiilikainen and Mager. Id.

Discussion of "Maintaining"

Claims 1, 5 and 12 recite "maintaining" the last input of an input key "... for a minimum input time interval". Claim 12 recites "maintaining" the last input of an input key "... for a predetermined time interval." In the present application "maintaining" the input of the input key for a minimum input or predetermined time interval requires depressing the key for longer

CHO
"Mobile Communication Devices With
Quick-Send Features And Methods Therefor"
Atty. Docket No. CS11122

Appl. No. 09/941,265
Confirm. No. 7226
Examiner M. Genack
Art Unit 2645

than is required to input a number for normal (non-speed) dialing. Applicant's use of the term maintaining is set forth in the specification, on page 7, line 19- page 8, line 4 as follows:

... transmission of a communication address ... is performed by inputting and maintaining the last of the key inputs for a minimum input time interval. ... [T]he associated "work" telephone number for "HAN" is transmitted upon depressing and holding the "1" key for a predetermined time interval ... [and] the "Home" telephone number for "HAN" is transmitted by sequentially depressing the "1" key twice, within a software specified time interval that would capture two sequential inputs by most users, and then maintaining the "1" key input for another predetermined time interval.

To be sure, the American Heritage® Dictionary of the English Language, Fourth Edition, defines "main·tained, main·tain·ing, main·tains" as follows: 2. *To keep in an existing state; preserve or retain: maintain one's composure.* Thus in the present application, including Claims 1, 2, 5 and 12, "maintaining" means depressing and holding an input key for some minimum or predetermined time interval other than what is required to actuate the switch.

Overview of Joglekar

At col. 10: 20-28, Joglekar discloses depressing input key (M1 or M2) 318 or 324 to actuate a switch that causes a processor to initiate automatic dialing. Joglekar does not disclose "maintaining" the input key beyond what is necessary to actuate the switch as recited in Claims 1, 2, 5 and 12. In Joglekar, there is no need to differentiate between speed dial inputs and normal (non-speed) dial inputs, since Joglekar uses dedicated keys 318 and 324 for speed dialing and numeric keys for normal dialing. Thus in Joglekar, it is

CHIO
"Mobile Communication Devices With
Quick-Send Features And Methods Therefor"
Atty. Docket No. CS11122

Appl. No. 09/941,265
Confirm. No. 7226
Examiner M. Genack
Art Unit 2645

unnecessary to hold or "maintain" keys 318 or 324 beyond what is necessary to make an electrical contact when speed dialing.

Discussion of Claim 1

Regarding Claim 1, Joglekar fails to disclose or suggest a

- ... method for sending information stored in a wireless communication device, comprising:
 - associating information stored on the wireless communication device with sequential inputs from an input key on the wireless communication device,
 - the sequential inputs including a first input and a last input;
 - transmitting stored information from the wireless communication device by entering sequential inputs associated therewith and maintaining the last input thereof for a minimum input time interval.

Joglekar discloses speed dialing by depressing one or more input keys associated with a particular number. At col. 10: 20-28, Joglekar discloses that depression of an input key actuates a switch that causes a processor to initiate automatic dialing. Joglekar does not disclose "maintaining" the input beyond what is necessary to actuate the switch. The "... maintaining the last input thereof for a minimum input time interval" limitation of Claim 1 is not inherent in Joglekar, since Joglekar does not disclose depressing the input key for any longer than is required to actuate the switch. Thus, contrary to the Examiner's assertion, Claim 1 is patentably distinguished over Joglekar.

Allowability of Claim 5

Regarding Claim 5, Joglekar fails to disclose or suggest an

CHO
"Mobile Communication Devices With
Quick-Send Features And Methods Therefor"
Atty. Docket No. CS11122

Appl. No. 09/941,265
Confirm. No. 7226
Examiner M. Genack
Art Unit 2645

... method for communicating from a mobile wireless communication device, comprising:
 associating a communication address stored on the mobile wireless communication device with sequential key inputs on the mobile wireless communication device,
 the sequential key inputs including a first key input and a last key input;
 transmitting a stored communication address from the mobile wireless communication device by entering sequential inputs associated therewith and maintaining the last key input for a minimum input time interval.

Joglekar discloses speed dialing by depressing one or more input keys associated with a particular number. At col. 10: 20-28, Joglekar discloses that depression of an input key actuates a switch that causes a processor to initiate automatic dialing. Joglekar does not disclose "maintaining" the input beyond what is necessary to actuate the switch. The "... maintaining the last input thereof for a minimum input time interval" limitation of Claim 5 is not inherent in Joglekar, since Joglekar does not disclose depressing the key for period longer than required to actuate the switch. Thus, contrary to the Examiner's assertion, Claim 5 is patentably distinguished over Joglekar.

Allowability of Claim 12

Regarding Claim 12, Joglekar fails to disclose or suggest a

... mobile wireless communication device, comprising:
 a processor;
 a memory for storing a plurality of communication addresses;
 an input pad having a plurality of input keys;
 means for associating a first communication address stored in memory with first and second sequential inputs of one of the input keys,

CHO
"Mobile Communication Devices With
Quick-Send Features And Methods Therefor"
Atty. Docket No. CS11122

Appl. No. 09/941,265

Examiner M. Genack
Art Unit 2645

means for transmitting the first communication address from the mobile wireless communication device upon entering the sequential key inputs associated therewith and upon maintaining a last of the sequential key inputs for a predetermined time interval.

Joglekar discloses speed dialing by depressing one or more input keys associated with a particular number. At col. 10: 20-28, Joglekar discloses that depression of an input key actuates a switch that causes a processor to initiate automatic dialing. Joglekar does not disclose "maintaining" the input beyond what is necessary to actuate the switch. The "... maintaining the last input thereof for a minimum input time interval" limitation of Claim 12 is not inherent in Joglekar, since Joglekar does not disclose depressing the key for any longer than is required to actuate the switch. Contrary to the Examiner's assertion, Claim 12 is thus patentably distinguished over Joglekar.

Arguments Re: Jang & Tiilikainen

Rejection Summary

Claims 3-4, 6-8 and 13-17 stand rejected under 35 USC 103(a) as being unpatentable over U.S. Publication No. 2002/0091754 (Jang) in view of U.S. Patent No. 5,710,810 (Tiilikainen).

The Examiner concedes that Jang "... does not expressly disclose the feature whereby at least two separate telephone numbers are associated with one name one [sic; on] the wireless telephone's calling list." Office action, 16 December 2005, page 6. The Examiner alleges, however, that Tiilikainen discloses that "... a given individual on the user's list may have more than one telephone number associated with him, in the context of quick dialing from a mobile telephone...." Id.

CTIO
"Mobile Communication Devices With
Quick-Send Features And Methods Therefor"
Atty. Docket No. CS11122

Appl. No. 09/941,265
Confirm. No. 7226
Examiner M. Genack
Art Unit 2645

Discussion of Claim 3

Regarding Claim 3, the prior art fails to disclose or suggest in combination with the limitations of Claim 1,

- ... storing at least first and second communication addresses related to a common identifier on the wireless communication device;
- associating the first communication address with a single input from a first input key, associating the second communication address with at least two sequential inputs from the first input key;
- transmitting the first communication address by entering the single input from the first input key for a specified time interval, transmitting the second communication address by entering the at least two sequential inputs from the first input key and maintaining the last of the at least two sequential inputs for a specified time interval.

Contrary to the Examiner's assertion, Jang does not disclose speed dialing by associating a communication address with multiple strokes of the same input key. That Jang discloses the speed dial number may be "any numbers" does not support the conclusion that Jang suggests speed dialing a communication address using multiple inputs of the same key. Tiilikainen merely discloses associating different telephone numbers with the same individual. There is no suggestion in either reference for associating more than one communication address related to a common identifier with corresponding inputs of the same key. Moreover, assuming Jang suggests associating a communication address with multiple inputs of the same key, there is no suggestion in Jang for associating different numbers of inputs of the same key with corresponding addresses associated with the same identifier, e.g., the same individual. Claim 3 is thus patentably distinguished over the art.

Appl. No. 09/941,265
Confirm. No. 7226
Examiner M. Genack
Art Unit 2645

Discussion of Claim 6

Regarding Claim 6, the prior art fails to disclose or suggest in combination with the limitations of Claim 5,

... associating a first communication address stored on the mobile wireless communication device with a single key input on the mobile wireless communication device,

associating a second communication address stored on the mobile wireless communication device with at least first and second sequential key inputs of the same key input associated with the first communication address,

transmitting the first communication address from the mobile wireless communication device by entering the single key input associated therewith and maintaining the single key input for a minimum input time interval;

transmitting the second communication address from the mobile wireless communication device by entering the first and second sequential key inputs associated therewith and maintaining the second key input for a minimum input time interval.

Contrary to the Examiner's assertion, Jang does not disclose speed dialing by associating a communication address with multiple strokes of the same input key. That Jang discloses the speed dial number may be "any numbers" does not support the conclusion that Jang suggests speed dialing a communication address using multiple inputs of the same key. Claim 6 is not limited to associating the communication addresses with a common entity. Thus the relevance of Tiilikainen is unclear. Claim 6 is thus patentably distinguished over the art.

Art Unit 2645

Discussion of Claim 7

Regarding Claim 7, the prior art fails to disclose or suggest in combination with the limitations of Claim 6,

... associating the first and second communication addresses stored on the mobile wireless communication device with a common identifier.

Tiilikainen merely discloses associating different telephone numbers with the same individual. There is no suggestion in either reference for associating more than one communication address related to a common identifier with corresponding inputs of the same key. Moreover, assuming Jang suggests associating a communication address with multiple inputs of the same key, there is no suggestion in Jang for associating different numbers of inputs of the same key with corresponding addresses associated with the same identifier, e.g., the same individual. Claim 7 is thus patentably distinguished over the art.

Discussion of Claim 13

Regarding Claim 13, the prior art fails to disclose or suggest in combination with the limitations of Claim 12,

... means for associating a second communication address stored in memory with a single input of the same input key associated with the first communication address,

means for transmitting the second communication address from the mobile wireless communication device upon entering the single key input associated therewith and upon maintaining the key input for a predetermined time interval.

Art Unit 2645

Contrary to the Examiner's assertion, Jang does not disclose speed dialing by associating a communication address with multiple strokes of the same input key. That Jang discloses the speed dial number may be "any numbers" does not support the conclusion that Jang suggests speed dialing a communication address using multiple inputs of the same key. Claim 13 is not limited to associating the communication addresses with a common identifier, e.g., the same individual. Thus the relevance of Tiilikainen is unclear. Claim 13 is thus patentably distinguished over the art.

Discussion of Claim 14

Regarding Claim 14, the prior art fails to disclose or suggest in combination with the limitations of Claim 13,

... the first and second communication addresses associated with a common identifier stored in memory.

Tiilikainen merely discloses associating different telephone numbers with the same individual. There is no suggestion in either reference for associating more than one communication address related to a common identifier with corresponding inputs of the same key. Moreover, assuming Jang suggests associating a communication address with multiple inputs of the same key, there is no suggestion in Jang for associating different numbers of inputs of the same key with corresponding addresses associated with the same identifier, e.g., the same individual. Claim 14 is thus patentably distinguished over the art.

CLAIMS PENDING ON APPEAL

1. (Original) A method for sending information stored in a wireless communication device, comprising:

associating information stored on the wireless communication device with sequential inputs from an input key on the wireless communication device,

the sequential inputs including a first input and a last input;

transmitting stored information from the wireless communication device by entering sequential inputs associated therewith and maintaining the last input thereof for a minimum input time interval.

2. (Original) The method of claim 1, associating information stored on the wireless communication device with sequential inputs of the same input key on the wireless communication device.

3. (Original) The method of Claim 1,
storing at least first and second communication addresses related to a common identifier on the wireless communication device;

associating the first communication address with a single input from a first input key, associating the second communication address with at least two sequential inputs from the first input key;

transmitting the first communication address by entering the single input from the first input key for a specified time interval, transmitting the second communication address by entering the at least two sequential inputs from the first input key and maintaining the last of the at least two sequential inputs for a specified time interval.

4. (Original) The method of Claim 3, storing the first communication address in a memory address location having an identity corresponding to a numeric input key number, storing the second communication address in a memory address location having an identity corresponding to at least two of the numeric input key numbers.

5. (Original) A method for communicating from a mobile wireless communication device, comprising:

associating a communication address stored on the mobile wireless communication device with sequential key inputs on the mobile wireless communication device,

the sequential key inputs including a first key input and a last key input;

transmitting a stored communication address from the mobile wireless communication device by entering sequential inputs associated therewith and maintaining the last key input for a minimum input time interval.

6. (Original) The method of Claim 5,

associating a first communication address stored on the mobile wireless communication device with a single key input on the mobile wireless communication device,

associating a second communication address stored on the mobile wireless communication device with at least first and second sequential key inputs of the same key input associated with the first communication address,

transmitting the first communication address from the mobile wireless communication device by entering the single key input associated

therewith and maintaining the single key input for a minimum input time interval;

transmitting the second communication address from the mobile wireless communication device by entering the first and second sequential key inputs associated therewith and maintaining the second key input for a minimum input time interval.

7. (Original) The method of Claim 6, associating the first and second communication addresses stored on the mobile wireless communication device with a common identifier.

8. (Original) The method of claim 7,
associating a third and fourth of communication addresses stored on the mobile wireless communication device with a second common identifier,

associating the third communication address with a second single key input on the mobile wireless communication device, the second single key input different than the single key input,

associating the third communication address with at least first and second sequential key inputs of the same key input associated with the third communication address,

transmitting the third communication address from the mobile wireless communication device by entering the second single key input associated therewith and maintaining the second single key input for a minimum input time interval;

transmitting the fourth communication address from the mobile wireless communication device by entering the first and second sequential key

inputs associated therewith and maintaining the corresponding second key input for a minimum input time interval.

9. (Original) A method for transmitting an Internet address from an Internet enabled mobile wireless communication device, comprising:

associating an Internet address stored on the mobile wireless communication device with at least one key input on the mobile wireless communication device;

transmitting the stored Internet address from the mobile wireless communication device by entering the key input associated therewith and maintaining the key input for a minimum input time interval.

10. (Original) The method of Claim 9,

associating the Internet address stored on the mobile wireless communication device with a plurality of at least two sequential key inputs on the mobile wireless communication device,

the sequential key inputs including a first key input and a last key input;

transmitting the stored Internet address from the mobile wireless communication device by entering sequential first and second key inputs associated therewith and maintaining the last key input for a minimum input time interval.

11. (Previously Presented) The method of Claim 10, associating the Internet address stored on the mobile wireless communication device with a plurality of at least two sequential key inputs of the same key on the mobile wireless communication device.

Title: "Mobile Communication Devices With Quick-Send Features
And Methods Therefor"

DECLARATION UNDER 37 C.F.R. § 1.131

Commissioner for Patents
Alexandria, Virginia 22313-1450

Sir:

This declaration is to establish conception of the subject matter of the present application in the United States or other region permitted by Rule prior to the effective date of United States Patent Application Publication No. 2002/0091754 A1 filed on 26 December 2000 entitled "Wireless Internet Shortcut Connection method Using Numerical Combination And Wireless Internet Connection Method Using Shortcut Buttons" to Jung et al. (Jung), and diligence to the filing the present application (constructive reduction to practice) from a time prior to the effective date of the Jung Publication to a priority filing date of the present patent application.

In support of this Declaration, I, Han S. CHO, declare and sayeth the following:

CHO
"Mobile Communication Devices With

DISCLOSURE FOR PATENT COMMITTEE

SUBMITTED PURSUANT TO EMPLOYMENT AGREEMENT

FOR INSTRUCTIONS FOR COMPLETION REFER TO DISCLOSURE INSTRUCTION PROCEDURE

Inventor must fill in items 1 thru 12.

Items 2 to 5 may require extra sheets. BE SURE they are signed, witnessed and attached.

1. Name of the invention. (Limit to ten words.)

Memory Key

2. State the problem(s) resolved by the invention.

Reduces confusions, avoids having to memorize more numbers, and reduces call making time.

Improves convenience factor.

3. Describe the invention in detail. Include its operation, purpose, environment and how problem(s) were solved. (Use separate sheets as required.) (see attached sheet)

By adding multiple, repeating, numbers as a memory location for phone/pager numbers, users can easily associate someone's numbers (office, home, cell, pager, etc.) into one set of memory location (i.e. 5, 55, 555, 5555, etc.).

4. What new elements (e.g. components, circuits, process steps) or combinations of known elements or software algorithm produced the improvement(s) over known technology?

A software update will allow this to happen. Instead of limiting the memory location from 0 to 99, include memory locations for repeating numbers (2, 22, 222, 2222, etc.) without having to create memory locations for all #beyond 99.

5. List the closest known technology (attach article, patent, catalog sheet or other documentation).

N/A

6. What are the potential applications for use of this invention?

Being the leader in cell phone innovation, the potential for this invention is very high. Any phones with keypads can benefit from this invention.

7. Conception date? (attach earliest log sheets, drawings, etc., to support dates)

8. To whom did you first disclose this invention? Name: *Mark Janninck* Date: *[redacted]*

9. Date the device was first built and tested. *NA*

Present location of the device?

DETERMINATION OF LEGAL INVENTORSHIP FOR PATENT APPLICATION MUST BE MADE BY THE PATENT DEPARTMENT.

Inventor's signature (IMPORTANT - YOU MUST USE YOUR FULL FIRST, MIDDLE AND LAST NAMES).

10. Inventor's Full Name: (Type) <i>Han S. Cho</i>	Signature <i>Han S. Cho</i>	Date <i>[redacted]</i>	Social Sec. No. <i>10311872</i>

Home Address: Street		City	State	Country	Zip Code
Citizen of (i.e. U.S., Germany, Etc.)		Dept. No.	Phone	Room No.	Employee Status Permanent Contractor
Witness signatures (TWO WITNESSES ARE REQUIRED) Witness must sign and date this form and all attachments. THE WITNESSES IN SIGNING THIS FORM ATTEST TO THE FACT THAT THEY UNDERSTAND THE INVENTION.					
13. Witness Name (Type) Adam R. Cole		Signature <i>Adam R. Cole</i>	Date [Redacted]	Phone 847-523-8783	
14. Witness Name (Type) MARK JAWINEK		Signature <i>Mark Jawinek</i>	Date [Redacted]	Phone 3-0544	
Items 15 to 25 are to be filled in by the ENGINEERING and MARKETING/PRODUCT MANAGER or equivalent. Use separate sheets as required. THE MANAGERS IN SIGNING THIS FORM ATTEST THAT THEY UNDERSTAND THE INVENTION					
15. What product will this invention be used in? (No code names - use brief description if necessary) <i>could be used in any phones with key boards.</i>					
16. When (was) (will) the first offer for sale of a product incorporating this invention (be) made? Date: <i>NA</i>					
17. When is the estimated shipping date? <i>NA</i>					
18. When (was) (will) the first disclosure outside of Motorola (be) made? How and to whom? Nondisclosure agreement signed? State title and date of publication, if any.					
19. What is the market for products incorporating this invention? <i>As more manufacturers want to improve user interface, simplifying and updating our usability of the phone makes this idea a critical element</i>					
20. Who are the potential competitors? What is the possibility this invention will be used by competitors? Which ones? <i>All competitions are looking to improve user interface and user simplicity.</i>					
21. Did this invention result from work on a development contract: (YES) (NO) Contract No. _____ Who was the contracting party?					
22. Discuss the business impact that this invention will have on Motorola. Be specific and quantitative. <i>The market for cell phones will be over 400 million in 2001. Consumers will pay more attention to user interface or user simplicity when making purchase decisions.</i>					
23. Engineering Manager's Name (Type) Scott B. Beutner		Signature <i>Scott B. Beutner</i>	Date [Redacted]	Dept. No. 84578	Phone 3-1370
24. Product/Marketing Manager's Name (Type)		Signature	Date	Dept. No.	Phone
25. The Manager must determine the security classification of this information. See Personnel Policy #840, and Corporate SOP E60, Protection of Proprietary Information.					

PCSNI-PC Office97-Excel (990527), from Macintosh EXCELv2.2 (910125)-p.2

Purpose of this idea is to add convenience and simplicity to already hectic user interface. It will be nice to associate all the telecommunication numbers of one person to one particular character from 1 to 9 for the 9 most active people dialed. For instance: If I associate my boss with number 7, I can appoint all of his contact information into memory locations that contain only character 7. I can assign his Cell phone number to memory location 7, Home number to memory location 77, Office number to memory location 777, and his Pager number to memory location 7777, etc. I don't need to scroll through names and number, press a lot of numbers, and have constant visual contact with the display screen trying to make a selection. The last digit pressed can be held so that it can act as a "send" command and can be used to distinguish recalling information from the memory location and not trying to dial that particular number (dialing 555 and pressing "send" will connect to Verizon operator assistance instead of dialing the number stored under that location; pressing and holding the last digit "5" can be programmed to look for the number stored under that location).

Every phone I experienced only had memory locations 1 to 99. There may be no need to expand the memory locations beyond this, other than repeated numbers.

SUPPLEMENTAL DECLARATION
UNDER 37 C.F.R. § 1.131

Commissioner for Patents
Alexandria, Virginia 22313-1450

Sir:

This declaration is to establish diligence in the preparation of the present application in the United States or other region permitted by Rule prior to the effective date of United States Patent Application Publication No. 2002/0091754 A1 filed on 26 December 2000 entitled "Wireless Internet Shortcut Connection method Using Numerical Combination And Wireless Internet Connection Method Using Shortcut Buttons" to Jung et al. (Jung) from a time prior to the effective date (26 December 2000) of Jung to a priority filing date (30 March 2001) of the present patent application corresponding to provisional application 60/280,224, from which the instant application claims benefits under 35 USC 120.

Applicant's Declaration dated 28 February 2001 averred that the instant application contains no new matter relative to the priority provisional application from which benefits were claimed under 35 USC 120.

In support of this Declaration, I, Roland K. Bowler II, undersigned attorney of record, declare and sayeth the following:

That an invention disclosure (Attorney Docket No. CS11122) forming the subject matter of the referenced invention was assigned to my docket after review of the disclosure by a Motorola, Inc. Patent Committee on or before the effective date of Jung;

That I expeditiously worked on the preparation and/or filing of the following patent applications on my docket backlog between the effective date (26 December 2000) of Jung and the priority filing date (30 March 2001) of the present patent application in chronological order:

<u>Atty. Docket No.</u>	<u>Filing Date</u>	<u>Application No.</u>

That I sent a draft patent specification and drawings to the inventor for review prior to 28 March 2001, and thereafter I sent a revised patent specification to the inventor on 28 March 2001. A true copy of an e-mail cover message evidencing these communications is attached as Exhibit A;

That the provisional patent application 60/280,224 from which the instant application claims benefits under 35 USC 120 was filed expeditiously on 30 March 2001 upon final review and approval of the specification and drawings by the inventor on 30 March 2001; and

That all statements made herein of my/our own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

CONFIDENTIAL & PRIVILEGED COMMUNICATION
PREPARED IN RESPONSE TO A
REQUEST FOR LEGAL ADVICE

Kindly review the attached revised patent specification for accuracy and completeness before signing the formal paper tomorrow. The drawings remain unchanged.

Any revisions should be forwarded to me immediately.

Finally, kindly note that inventors have an ongoing duty to disclose to the Patent Office any information, e.g. prior patents, publications, etc., that is material to the patentability of the claimed inventions. Please bring any information of which you are now aware or later become aware to my attention promptly so that we may discharge our duty accordingly. Contact me if you are in doubt about the relevance of any information.

Thank you for your assistance with this important matter.
